

Hello everyone!

It's a privilege to be here with you for this momentous event. For the past three days I have been working tirelessly to integrate Cucumber's QGib, the ultimate typing assistant in Monday.Com marketplace, and to develop my first AI Tool ever!

[Slide]

My name is Or and I am a former backend developer at Payoneer, an independent Unity Developer, developing exciting extended reality games, with six games at the Play Store, and still going strong! A Chrome Extension Developer, and well... for the past three days, a Monday.Com Marketplace App Developer.

[Slide]

So here in Israel, most of the people that I know have a problem. As Hebrew and English speakers, we tend to type blindly on the keyboard, and oops! We forgot to change the language. It is super frustrating!

[Slide]

QGib, has got you covered. You turn on the app, and using Monday's SDK, QGib grabs what you wrote, and suggests a switch. There is a very simple logic behind it, but it works brilliantly!

[Slide]

I wanted to take with me on the journey of learning these new technologies hundreds of tech-geeks, so I have decided to make QGib codebase open-source! It instills trust in our customers, let the community find bugs easier, and of course contribute new features and languages.

[Slide]

At release QGib will support three languages: English, Arabic and Hebrew. And even better, QGib code was designed to help support new languages in just a few steps, as a main and centric design requirement!

This is QGib!

[Slide]

Oh! Oh! I almost forgot! There is one more thing!

[Slide]

I am so proud and so excited to introduce Cucumber's first AI product. Introducing QAI AL-Safa!

[Slide]

I understand that many of our friends worldwide are only using English, hence the first use-case of QGib is irrelevant to them. QGib is an incredible product, and I want

everyone to be able to use it and get a tremendous value from it.

QAI AL-Safa, gets the text generated from QGib, running it in a Natural Language Processing model and check for grammatical errors and typing errors, making QGib app a must-have app to all Monday.Com customers!

[Slide]

What's better, QGib, offers conversion from English to English, letting you enjoy the power of QAI AL-Safa exclusively. I am proud to use the revolutionary API of OpenAI in QAI AL-Safa!

[Slide]

Thank you so much for a wonderful opportunity to get to know you, let's see a live demo.

Type: איך צםמגשט שן ישרבלשאים שצשזןמע!
